MoonStone

Found within the pages of this brochure is a unique selection of excellent products, all of them designed to fulfill their specific purpose at the highest level of efficiency.

Our modular sleeping bags and liners allow users to affordably address individual adventures, without the need for a closet full of special purpose bags. And beyond the highly touted layering approach to clothing use, is our concept of "integrated software" – clothing patterned and designed for system use.

Used alone, or in various combinations, these items provide versatility and performance unmatched by traditional gear. This basic design approach creates products which excel in a variety of wilderness pursuits; from winter mountaineering to fantasyland kayaking. Backing up these features are quality materials and workmanship worthy of our lifetime guarantee.

Compare the long lived value of products built in these ways. Superior performance, over years of hard use, are the dividends they pay.

MOONSTONE SLEEPING BAGS, PIONEERING NEW PERFORMANCE LEVELS

With literally hundreds of sleeping bags available on todays market, the obvious question is – "why choose Moonstone." Moonstone is the recognized leader in synthetic sleeping bag design. We were the first, and in many cases, remain the only manufacturer to produce synthetic bags with Gore-Tex shells, three dimensional cupped hoods, shoulder collars, ground level side seams, radiant barrier insulation, and variable thickness layering, etc.

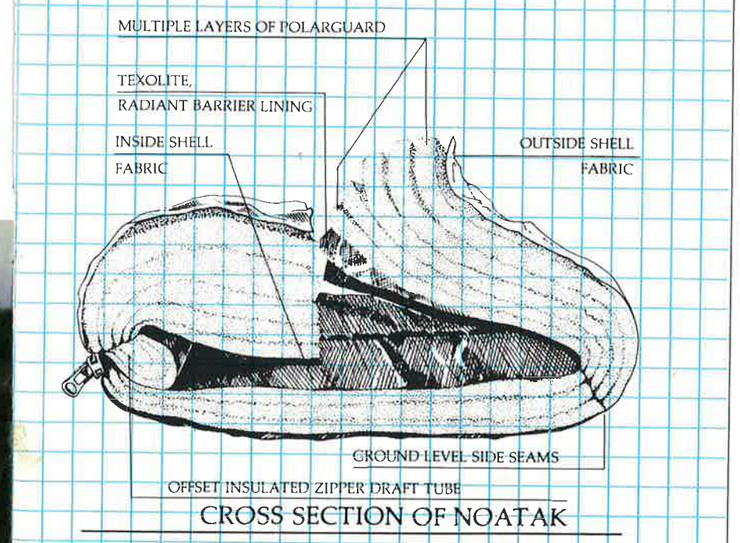
Since 1977 we have adhered to one principle design philosophy – to build performance products without compromise. The following materials and design features illustrate this commitment.

VARIABLE THICKNESS LAYERING

Constantly refined, our exclusive Variable Thickness Layering yields unequalled loft, compressibility and durability. High thread count nylon taffettas and thin PolarGuard batts are cut separately before being quilted at 14" intervals on single needle lockstitch machines. By quilting only thinner batts at larger intervals we disrupt much less loft than common multi-needle quilting methods.

Our warmer bags feature full floating batts to provide additional loft. We carefully distribute the insulation into areas subject to the highest heat loss by providing more insulation in the top and foot sections. Efficient hip length partial floating layers are added to the torso section on all side zip bags except our mild weather Island Packer. Ground level side seams minimize exposure of the thinner bottoms on all side zip bags.

Variable thickness layering is further enhanced by differentially cutting both the length and girth. This means the inside is cut smaller and shorter to reduce insulation compression caused by inside pressures. The Island Packer and standard Upside Downside do not employ this feature.



CROSS SECTION OF NOATAK

Chopped fiber insulations separate easily to form cold spots. PolarGuard's continuous filaments maintain uniformity.

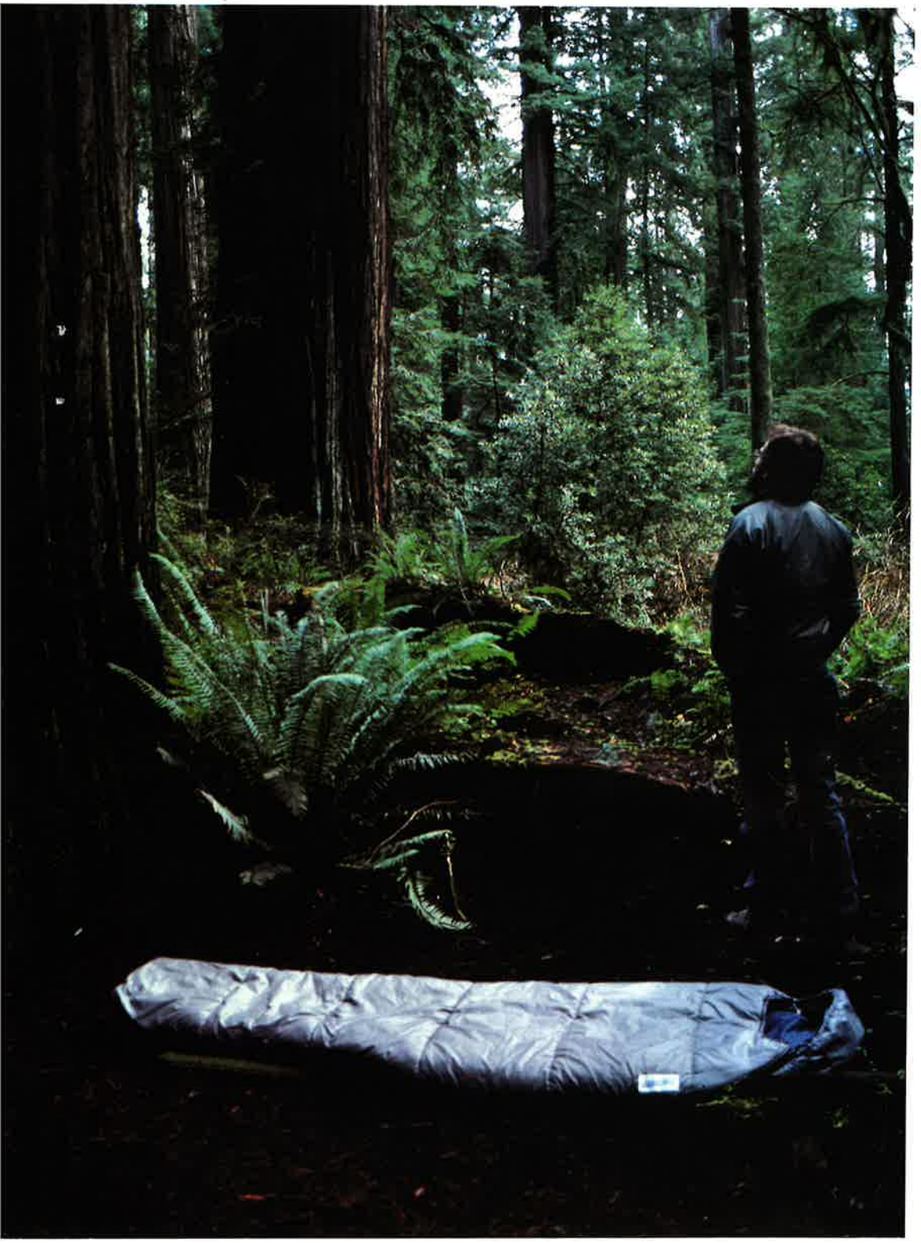
DEPENDABLE POLARGUARD INSULATION

Proven on countless expeditions in the harshest environments, PolarGuard remains our insulation of choice. While not as light and compressible as high quality down, it offers several advantages equally important in the overall performance of the sleeping bag it insulates.

PolarGuard dries many times faster than down and maintains much better insulation when wet. This is because PolarGuard is made from polyester filaments which absorb virtually no moisture. PolarGuard is easy to care for, non-allergenic and completely odorless. Unlike down, PolarGuard will not escape if a bags shell fabric is accidently torn.

PolarGuard's continuous filament construction provides it with stability and long term uniformity unmatched by any other sleeping bag insulation, down or synthetic. PolarGuard does not require heavy carrier scrims or excessive quilting. Scrims and tight quilting intervals add weight and restrict loft in a futile attempt to provide acceptable stability to less expensive chopped fiber insulations.

MODULAR SLEEPING BAGS – VERSATILITY MAXIMIZED



Modular Sleeping bags may be used alone, or with any of our liners, as the conditions dictate. This allows the user to own and carry only those components needed for any particular adventure. Strong nylon loops provide the liners with secure fastening points to eliminate claustrophobic twisting.

A plump offset draft tube prevents heat loss along the smooth sliding YKK coil zipper. Ground level side seams place the tube in a position where dislocation by movement is unlikely. The preformed cupped hood reduces loft restricting bunching, and provides a more comfortable seal around the face.

Our silky, 100% nylon taffetta shell fabric is tightly woven. At 1.7 oz. yd.^{2}, this durable fabric provides much better windproofness than other less expensive alternatives.

A perfect choice for summer backpacking, river running, or bike touring, the 2¼ pound **Island Packer** isn't short on standard Moonstone features. In addition to inside liner loops, outside ties enable an Island Packer to be used as a liner itself.

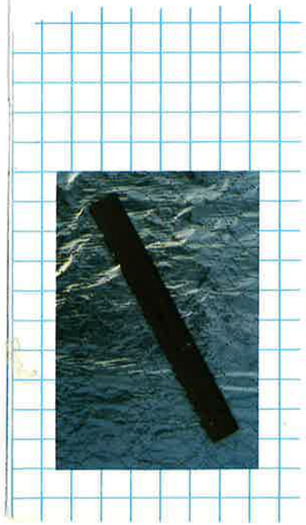
The 3¼ pound **Orion** was designed for three season use. Tie in the appropriate liner and venture easily into the winter wilderness. A bottom zipper slider allows easy ventilation on the warmest nights.

Appropriate for cold weather backpackers or occasional winter use, our **Polaris** can easily be extended for use in Arctic conditions. Four thick layers of PolarGuard cover the upper body from ground level. A very versatile and efficient 4¼ pounds.

ALUMINA SLEEPING BAGS UNSURPASSED PERFORMANCE

These are the most efficient bags we build. They contain all the sophisticated features found in our Modular Series, plus a full integral radiant barrier lining and draft stopping shoulder yoke. For those campers constantly encountering wet conditions, a shell option of waterproof/breathable Gore-Tex fabric is available. Gore-Tex is standard with our expeditionary Noatak.

Texolite radiant barrier insulation provides Moonstone Alumina bags with warmth-to-weight ratios and compressibility unmatched by other synthetic sleeping bags. A composite of two needle punched aluminized membranes and nylon mesh, Texolite controls radiant and evaporative heat loss. The combination of these two effects allows a 6 ounce layer of Texolite to replace approximately 10-12 ounces of bulkier PolarGuard.



The **Sequoias** waterproof stuff sack protects it in a package only ten inches in diameter by seventeen inches long. Designed for three season use, this bag is easily extended with one of our tie-in modular liners. A Gore-Tex fabric shell is available for additional waterproof security.

Our four season **Bitterroot's** incredible stuffed size offers no problem for winter outings with internal frame packs. The unique shoulder yoke is softer and less constricting than drawstring type collars. The Gore-Tex option is welcomed by those who spend much time in drippy snow caves and soggy tents.

Think carefully before selecting a **Noatak**. This bag has been used extensively on expeditions throughout the world. Available only in Gore-Tex, the superwarm Noatak is the probably the safest choice for extreme winter adventure. This bag is not suitable for warm weather camping.

THE UPSIDE DOWNSIDES - DUAL COMFORT RANGE BAGS

With a simple flip of the bag, our unique Upside Downsides adapt to the change of seasons. These roomy semi-rectangular bags employ two zippers which allow them to be mated with any other Moonstone bag or opened flat as queen sized comforters. Our optional preformed cupped hood attaches easily for additional warmth.

The standard **Upside Downside** uses the same amount of PolarGuard top and bottom. A warmer side is created by including a layer of Texolite radiant barrier insulation. On chilly nights this side is used above the body to provide additional warmth.

Suitable on warm nights, or even for some winter use, the **Upside Downside YR's** cryptic suffix stands for "year round." A layer of Texolite and additional Polarguard are used in the warmer side.

Either Upside Downside can be converted to a comfortable double bag with the addition of **The Doubler**. This bottom sheet holds two full length pads securely, and provides a convenient pillow pouch.

MODULAR SLEEPING BAG LINERS

Moonstone modular liners are the sensible alternative to a second sleeping bag. Three models cover everything from warm humid nights to heavy winter use. Ten to twelve nylon ties provide secure fastening points when used with all Moonstone bags except the Upside Downsides. Partial side zips allow easy entry and ventilation. Elastic drawcord pulls tight to form a collar around the shoulders.

Our **Cotton Liner** helps keep a bag clean. Perhaps more important is the absorbency it adds on warm humid nights. This 11 ounce liner is made from a tri-blend for strength.

The 14 ounce **Radiant Barrier Liner** uses Texolite to add 15-20°F. of warmth to an average bag. Shell fabric is made from soft 1.2 oz. yd.² ripstop nylon.

Our **Extender** works great as a 30 ounce superlight bag. As a liner, the combination of PolarGuard and Texolite add 25-30°F. to an existing bag. Shell fabric is the same 1.2 oz. yd.² ripstop used in the R.B.L. A Stuff Sack is included.

PERSONAL SHELTER

Personal Shelters are 18 ounces of versatility. Made from Gore-Tex fabric, a waterproof/breathable composite, they provide excellent refuge from unexpected wind and rain. Winter campers use them to add warmth and keep bags dry in wet tents or snow caves. Mild weather campers tout the bug protection of zippered mosquito netting.

Double overlapping zipper flaps help seal water out. Generous use of Gore-Tex fabric greatly reduces the condensation problems associated with cheap shelters. The roomy Personal Shelter is easier to dress in than staked down, tent-like shelters weighing 2-3 times as much.

NOTES FOR SPEC CHART: All temperature ratings are subject to the following variables: body metabolism and physical condition, degree of wind convection, the use of insulated ground pads and the amount and type of clothing in use while sleeping. Due to normal variances in the process of manufacturing PolarGuard, weights may vary by as much as 10% above or below the weights listed. Texolite radiant barriers make loft comparisons much less meaningful.

FIBERPILE CLOTHING

Moonstone Pile Clothing forms the foundation of our clothing system. Fiberpile clothing provides roughly twice the insulation value as wool per unit weight, maintains more warmth when wet and dries much faster. It has become the choice insulator of outdoorspeople who pursue their craft in inclement weather. Many different pile fabrics are available with a wide variety characteristics.
Our fabric, MoonLite Pile, is made from 100% polyester yarn. Polyester pile absorbs much less water than nylon and provides more warmth per unit weight than polypropylene. MoonLite's unique circular knit construction provides it with much better stretch, shape retention and pill resistance than other more common pile fabrics. More appropriate for layering, MoonLite Pile provides insulation over an extremely wide comfort range without the movement restrictions associated with heavy, bulkier fiberpiles.

PILE PANTS

Nothing beats Pile Pants for warming your bottom half. Full length separating side zips mean you won't have to remove skis or heavy boots to put them on. A textured nylon waistband encases wide no roll elastic to keep them up comfortably.

Color: Dk. Royal
Weight: 15 oz.
Sizes: XS-XL

PILE ZIPFRONT

Our Pile Zipfront epitomizes those features desirable in an insulative layering garment. Careful patterning along with the stretchy nature of MoonLite Pile yields unprecedented freedom of movement. Underarm zippers extend the comfort range. A pile flap backs the full length front zipper.

Toasty handwarmer pockets, a double thickness collar and comfortable stretch knit trim add comfort and warmth.

Color: Dk. Royal or Silver Grey
Weight: 18 oz.
Sizes: XS-XL

PURIST PILE JACKET

As the name implies, the Purist underlines function. This is the choice for warmth when a drenching is almost unavoidable. The absence of stretch knit trim promotes quicker drying. Underarm zippers, double thickness collar, handwarmer pockets and the full length front zipper flap all combine to set it apart.

Color: Dk. Royal
Weight: 15 oz.
Sizes: XS-XL

PILE MITTENS

MoonLite Pile Mittens warm frigid digits as the quick drying, stretchy alternative to wool.

Color: Dk. Royal
Weight: 2 oz.
Sizes: S, M, L

VAPOR BARRIER SYSTEM

Moonstone Vapor Barrier Clothing provides the most efficient and affordable insulation for cold weather activities. Vapor Barriers work by greatly reducing evaporative heat and fluid loss, a byproduct of the bodies struggle to maintain protective skin level moisture in cold, dry air. These light and compact impermeable layers also prevent loft inhibiting condensation from forming within conventional insulations.

Because insulation requirements vary with activity, improperly designed vapor barrier clothing can severely restrict the comfort range of an insulation system. Our full length leg and underarm zips address this problem by providing a pathway for evaporative cooling.

Our V.B. clothing is made from durable coated nylon. The shirt includes a flap backed front zipper, underarm zips and velcro cuff closures. The pants feature separating leg zips, velcro cuff closures and a comfortable elastic waistband. V.B. Pants make excellent lightweight rainpants.

Shirt weight: 7 oz.
Pants weight: 8 oz.
Sizes: XS-XL

leakage through seams. Moonstone goes well beyond just the so called critical hood and shoulder seams by sealing virtually every seam within the garment. This labor intensive process provides lifetime protection through the pressure application of special heat activated waterproof tape.

Thoughtfully engineered design features enhance the performance of these unique materials and time consuming construction techniques. Rather than compromise the breathability of the Gore-Tex fabric by using the less expensive three layer construction, we completely line these garments with soft nylon taffetta. Underarm zippers and full length leg zips drastically increase the comfort range by providing additional ventilation. Careful patterning, and the custom fit of our double drawcord hood, results in the best moving garments available.

HUMBOLDT BAY SERIES

Three breathable, windproof and waterproof GoreTex garments comprise the Humboldt Bay Series. GoreTex is a refinement of polytetrafluoroethylene film, a plastic whose microporous structure allows water vapor molecules to pass through, but prevents larger liquid water droplets from penetration. Much too fragile on it's own, this film is laminated to various fabrics for strength and protection.

Our Humboldt Bay Series uses a 1.7 oz. taffetta laminate, the logical choice for the majority of users. In shell garments, we have found the lighter 1.2 oz. ripstops subject to early delamination. Furthermore, the minimal protective coverage they provide increases the likelihood of pin holes forming to destroy the waterproofness. Taslan laminates are a good choice for those few activities subject to extreme abrasion. However, for most, there are several disadvantages. The textured yarn of taslan absorbs considerable moisture, snow tends to stick to its surface, and at 2.8 to 3.4 oz yd.^{2} it is considerably heavier and bulkier than taffetta.

Another area of concern in any waterproof garment is

Photo: John Dittle

HUMBOLDT BAY PARKA

Our 17 oz. Humboldt Bay Parka outperforms every all-weather parka in its class. Its durable Gore-Tex shell is a laminate of the same taffetta fabric often used for the finest tent floors. Full factory seam sealing assures uncompromising waterproofness. Double overlapping, velcro closing front flaps prevent water penetration through the two way zipper.

Fourteen inch underarm zippers provide additional ventilation as needed. Our unique double drawcord hood custom fits itself for maximum movement. The bottom hem seals with a comfortable elastic drawcord.

Three zippered pockets provide plenty of secure storage. Another handy feature is the parka's carrying pouch formed by reversing the inside stash pocket.

Colors: Medium blue or Charcoal
Weight: 17 oz.
Sizes: XS-XL

HUMBOLDT BAY PANTS

These all-weather pants put the zippers where they belong. Full length outside leg zips provide excellent ventilation and make it easy to dress, even while wearing heavy boots or skis. Velcro weather flaps keep the zips watertite.

Durability is reinforced by double layer coated fabric at the seat and knees. Fully factory sealed, these Gore-Tex pants are lined with lightweight nylon taffetta.

Inch and a half wide no-roll elastic keeps the pants up comfortably. A hip level zippered pocket converts easily to form a handy carrying pouch.

In driving rain and howling wind, Humboldt Bay Pants are the best protection available.

Colors: Medium blue
Weight: 17 oz.
Sizes: XS-XL

HUMBOLDT BAY JACKET

If your adventuring demands the superb all-weather protection of our Parka, but you'd prefer a shorter removable hood version, then the Humboldt Bay Jacket may be just the ticket. On the slopes, bike paths and everywhere between this Jacket maintains the same features found in the Parka.

Skiers will appreciate the smooth no-stick surface of taffetta Gore-Tex. The elastic drawcord hem will seal out icy blasts of powder. The snap on hood carries easily within the inside pocket/pouch. It's double drawcord custom fit provides excellent peripheral vision.

Velcro cuff closures and underarm zippers provide excellent ventilation. Double overlapping front zipper flaps and full factory seam sealing keep the weather out. Impeccable Moonstone workmanship in a Jacket soon to be a classic.

Colors: Medium Blue or Charcoal
Weight: 18 oz.
Sizes: XS-XL

Photo: John Dittle

HEADWIND JACKET

Our new Headwind Jacket takes a popular concept one step further. A windproof shell of soft high count nylon covers our exclusive MoonLite Pile. MoonLite Pile was developed to meet the critical demands of high mountain use. It excels in both warmth efficiency and dryability.

Quality stretch knit trim not only looks good, but provides a comfortable seal at the wrists and hem. The high, pile lined collar keeps your neck toasty. Zippered handwarmer pockets keep valuables secure.

The Headwind Jacket is the choice for those who appreciate impeccable workmanship, clean lines and are after more than just a label.

How to Order

Complete the order blank supplied. Be sure to include length and zip preference on sleeping bags.

Our standard method of shipping, via UPS, requires your street address. Include $2.50 for shipping and insurance. If you require special shipping other than surface UPS, please note on line marked special instructions and include additional estimated shipping charges. California deliveries must include 6% sales tax. Payment may be made with a check or money order.

Upon inspection you may return, for a full refund less shipping, any new and unused Moonstone product within ten days of receipt. Your satisfaction is our goal.
